LST 02/04/2005

1. A computer system comprising:

a hardware unit to transmit data representing graphics to another computer or a display;

a processor coupled to the hardware unit; and

a storage device coupled to the processor and having stored therein a routine, which when executing by the processor, causes the processor to generate the data, the routine at least causing the processor to at least,

access a first data operand having a data element;
access a second packed data operand having at least two data elements;

insert the data element in the first data operand into a destination field of a destination register.

- 2. The computer system of claim 1 wherein the storage device further comprises a packing device for packing floating point data into the data elements.
- The computer system of claim 1 wherein the storage device further comprises a packing device for packing integer data into the data elements.
- A computer system comprising:
- a hardware unit to transmit data representing graphics to another computer or a display:

Application/Control Number: 09/053,006

Art Unit: 2675

a processor coupled to the hardware unit; and

a storage device coupled to the processor and having stored therein a routine, which when executing by the processor, causes the processor to generate the data, the routine at least causing the processor to at least,

access a first packed data operand having at least two data elements; and

extract one of the data elements from the first packed data operand into a field of a destination register.

- 5. The computer system of claim 4 wherein the storage device further causes the processor to extract one of the data elements from the first packed data operand into a field of a packed destination register.
- 6. The computer system of claim 4 wherein the storage device further comprises a packing device for packing floating point data into the data elements.
- 7. The computer system of claim 4 wherein the storage device further comprises a packing device for packing integer data into the data elements.
- (Amended) A method comprising the computer-implemented [steps of]: decoding a single instruction;

in response to [the step of] decoding the single instruction,
accessing a first data operand having a data element;

accessing a second packed data operand having at least two data

elements;

Art Unit: 2675

inserting the data element in the first data operand into a destination field of a destination register.

- (Amended) The method of claim 8 further comprising [the step of] packing Boating point data into the data elements.
- 10. (Amended) The method of claim 8 further comprising [the step of] packing integer data into the data elements.
- (Amended) A method comprising the computer-implemented [steps of]: decoding a single instruction;

in response to [the step of] decoding the single instruction,

accessing a first packed data operand having at least two data elements:

and

extracting one of the data elements from the first packed data operand into a field of a destination register.

- 12. (Amended) The method of claim 11 wherein [the step of] extracting one of the data elements from the first packed operand comprises extracting one of the data elements from the first packed data operand into a field of a packed destination register.
- 13. (Amended) The method of claim 11 further comprising [the step of] packing floating point data into the data elements.
- 14. (Amended) The method of claim 11 further comprising [the step of] packing integer data into the data elements.
- 15. (Amended) A method comprising the computer implemented [steps of]: accessing data representative of a first three-dimensional image;

Application/Control Number: 09/053,006

Art Unit: 2675

altering the data using three-dimensional geometry to generate a second three-dimensional image, [the step of] altering at least including,

accessing a first data operand having a data element;
accessing a second packed data operand having at least two data elements;
inserting the data element in the first data operand into a destination field of
a destination register; and

displaying the second three-dimensional image.

- 16. (Amended) The method of claim 15 wherein [the step of] altering includes the performance of a three-dimensional transformation.
- 17. (Amended) The method of claim 15 wherein [the step of] altering includes [the step of] packing floating point data into the data elements.
- 18. (Amended) The method of claim 15 wherein [the step of] altering includes [the step of] packing integer data into the data elements.
- 19. (Amended) A method comprising the computer implemented (steps of): accessing data representative of a first three-dimensional image; altering the data using three-dimensional geometry to generate a second three-dimensional image, [the step of altering] at least including,

accessing a first packed data operand having at least two data elements; and extracting one of the data elements from the first packed data operand into a field of a destination register; and

displaying the second three-dimensional image.

20. (Amended) The method of claim 19 wherein [the step of] altering further includes [the step of] extracting one of the data elements from the first packed data operand into a field of a packed destination register.

Application/Control Number: 09/053,006

Art Unit: 2675

- 21. (Amended) The method of claim 19 wherein [the step of] altering includes the performance of a three-dimensional transformation.
- 22. (Amended) The method of claim 19 wherein [the step of] altering includes [the step of] packing floating point data into the data elements.
- 23. (Amended) The method of claim 19 wherein [the step of] altering includes [the step of] packing integer data into the data elements.
